Accelerate transformation
from edge to cloud

**Hewlett Packard
Enterprise**

Everywhere you look consumer interactions are becoming massively digital. Businesses are following suit, investing in digital transformation to tap new opportunities and improve efficiency. Digital transformation fundamentally changes how an organization operates and engages with its customers, supply chain, and internal workforce. To stay competitive and future-fit, organizations need to cultivate a digital culture and train their workforce for the transition.

And IT must build and manage a system that enables those users, programs, and processes to capitalize on data and apps that could originate anywhere. What's more, transformation projects must be managed simultaneously across all company stakeholders if the business is to achieve its digital ambitions.

The process can be overwhelming. End-to-end project management has become a deeply woven web between stakeholder groups, technologies, and activities. So, IT organizations accustomed to working on a project-by-project basis can find themselves mired in the planning process or stalled in implementation, buried in the day-to-day tasks that keep the business running.

A data-driven business requires an edge-to-cloud platform and a modern, end-to-end framework designed for agility.

Accelerate transformation with HPE Services

Successful transformation requires a fresh approach to optimizing your IT estate. It begins with aligning capabilities and digital aspirations to your business objectives. Next, your extended team must collaborate on goals and timelines while considering cost-effective and efficient options for financing and operation. And consensus amongst stakeholders is critical to the plan's success.

Wherever you are in the transformation process, Hewlett Packard Enterprise can help. During early planning, teams are specifically set up to address design and implementation. Then, HPE experts work with you to apply proven methodologies to transform your hybrid cloud. As a unique approach, we can create a transformation business office that can act as a governing body over the whole process. We can help you:

- **Plan:** Define the ideal future state, starting with the business objectives, financial considerations, and overall governance. Identify the requirements for your users, data, applications, operations, and security.

- **Establish a solution:** Together, we will design a scalable solution that accelerates innovation and collaboration with your cross-functional team. Whether you are looking at asset investment solutions, training your team, or anything in between, we can help you prepare for a smooth transition from current IT to the new framework.

- **Operate your environment:** Day-to-day IT operations can strain resources. HPE can manage IT operations with or for you, freeing up resources to keep your organization focused on what's important.

In partnership with HPE, organizations can speed innovation, de-risk processes, and scale operations to match evolving business requirements.

The Edge-to-Cloud Adoption Framework

HPE is uniquely positioned to join your team at any stage in your journey. Through HPE Transformation Services — Edge-to-Cloud Adoption Framework, we can identify the critical capabilities required to achieve an ideal hybrid cloud operating model for your business needs. In addition, this operating model allows you to manage workstreams effectively across distributed sites. Figure 1 illustrates the various elements of the adoption framework.

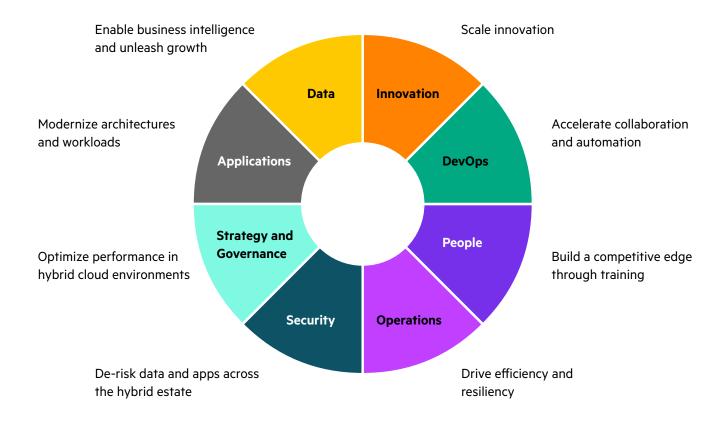

Figure 1. The Edge-to-Cloud Adoption Framework

The operating model is your blueprint for how people, processes, and technology will continue to drive value in your organization. Based on the HPE GreenLake edge-to-cloud platform, your operating model can provide cost-effective, always-on connectivity, compliance, and security for your data and apps. The platform enables systems and applications to connect and communicate quickly, so you can manage, protect, and capitalize all your data from edge to cloud.

HPE Services

HPE can connect your business ambitions to business outcomes by working through complex transformation projects alongside you. Our services experts understand your industry context. We closely collaborate with you across the project lifecycle and provide learning opportunities for your staff in an environment where people can thrive.

With day-to-day operations run for you, your organization has time to continue to attract and retain talent, and to focus on projects that drive your business growth.

Planning

HPE Services experts meet with stakeholders to capture the goals, needs, dynamics, and potential solution identification that will drive consensus across stakeholder teams. By understanding the success factors, we can create solutions for the likelihood of multiple projects needing to converge for better edge-to-cloud operational capabilities.

Operation

Choose a "managed for you" or "managed by you" approach. Operational services range from full management of your environment to expert management of specific tasks. The services experience includes self-solve capabilities, virtual agents, insights dashboards, and other powerful resources.

Asset lifecycle management

IT infrastructures are inherently multi-generational and can present challenges to digital transformation. Together we can holistically assess your multi-generational IT, from edge to cloud, to drive out inefficiencies, extend the useful life of your tech, and even change the way you think about asset retirement.

Training

Your people are at the core of your operating model. We provide best-in-class HPE and industry technology training to help attract, retain, and develop talent, as well as multiple training types and topics, allowing future fit organizations to offer continual technology and power skills training.
Financing

HPE can also create investment capacity to accelerate your digital transformation, including a shift to as a service. In addition to overcoming funding barriers, we can also unlock the value of your entire IT estate. This will help you transition more effectively with greater capacity for future business shifts.
